

# Regions and Subregions of the Cingulate Cortex

Brent A. Vogt

## Chapter contents

<b>Goals of this Chapter</b> 5	Anterior and posterior midcingulate cortex: aMCC/pMCC 20
<b>One- and Two-Region Models of Cingulate Organization</b> 5	Dorsal and ventral posterior cingulate cortex: dPCC/vPCC 21
<b>Cytological Regions: Intrinsic Organization</b> 7	<b>Limbic Cingulate Cortex</b> 21
The concept of transition in relation to midcingulate cortex 8	Resolving limbic cingulate functions by subregion 22
<b>Regional Circuits: Input/Output Organization</b> 9	<b>The Question of Attention</b> 23
<b>Midcingulate Cortex ≠ “Caudal” ACC</b> 11	<b>Selective Disease Vulnerabilities of Cingulate Regions: A Key Test of the Four-Region Model</b> 23
<b>Regional Functions</b> 12	Neuropsychiatric disease vulnerability 24
Anterior cingulate cortex: ACC 12	Chronic pain vulnerability 24
Midcingulate cortex: MCC 14	Neurodegenerative disease vulnerability 25
Posterior cingulate cortex: PCC 15	<b>Therapeutic Targeting of Cingulate Subregions and Challenges for Cingulocentric Research</b> 25
Retrosplenial cortex: RSC 15	<b>Acknowledgments</b> 26
<b>ACC/MCC Border and Metabolic Unit</b> 16	<b>References</b> 26
<b>Reciprocal Suppression: A Key to Functional Segregation of ACC and MCC</b> 16	
<b>Recent Imaging Approaches to Cingulate Nomenclature</b> 18	
<b>Cingulate Subregions</b> 20	
Subgenual and pregenual ACC: sACC/pACC 20
