

# Visceral Circuits and Cingulate-Mediated Autonomic Functions

Brent A. Vogt and Stuart W.G. Derbyshire

## Chapter contents

<b>Goals of This Chapter</b> 220	<b>Visceral Response Paradox #1: ACC “versus” MCC</b> 228
<b>Electrically Evoked Autonomic Activity</b> 221	<b>Visceral Response Paradox #2: ACC “versus” PCC</b> 230
<b>Visceral Sensory Afferents</b> 221	<b>Body orientation to visceral activity and pain</b> 230
Baroreceptor afferents 221	A thalamic mechanism 231
Mechanical and chemical afferents 222	<b>Multiple Roles of Cingulate Cortex in Visceral Integration</b> 231
Taste 223	<b>Acknowledgements</b> 232
Nociceptive visceral afferents 224	<b>References</b> 232
Visceral nociceptive circuitry 225	
<b>Efferent Cingulate Projections Regulate Autonomic Output</b> 226	
<b>Micturition</b> 228	
Circuit model 228	
Clinical intervention with biofeedback 228
