

Cingulate Nociceptive Circuitry and Roles in Pain Processing: The Cingulate Premotor Pain Model

Brent A. Vogt and Robert W. Sikes

Chapter contents

The Medial Pain and Limbic Systems Converge in the Cingulate Gyrus 312	Cortical MITN Projections 326
Goals of This Chapter 313	pMCC and dPCC: Nociceptive Sensorimotor Orientation of the Body 327
Human Cingulate Nociceptive Responses 314	Nociceptive activation of pMCC and dPCC 328
Nociceptive Intensity Coding and Innocuous Stimulus Driving 315	MITN input to PCC 328
Pathways for innocuous cutaneous and visceral information 316	Cingulate Premotor Areas in Nociception 329
Emotion and Pain Linkages 317	Nociceptive activation of the cingulate premotor areas 329
pACC 317	Role of the parafascicular nucleus in nocifensive behaviors 329
aMCC and Fear 318	MITN projections to cingulate premotor areas 329
Pain and emotion linkages 319	Gyrus and sulcal cortex interactions 330
Nociceptive Properties of Anterior Cingulate Neurons 320	MITN Connections Synchronize Medial-Limbic Pain System Participants 330
Three Sources of Nociceptive Driving of Thalamo Cingulate Projection Nuclei 322	MITN and CPMA Projections to the Striatum: Another Perspective on Nocifensive Behaviors 330
MITN nociceptive properties 322	The Cingulate Premotor Pain Model 331
Spinothalamic tract MITN terminations 324	The Limbic Medial Pain Neuromatrix: The Next Generation 333
Subnucleus reticularis dorsalis projections to MITN 325	References 334
Parabrachial projections to MITN 326
