

μ -Opioid Receptors, Placebo Map, Descending Systems, and Cingulate-Mediated Control of Vocalization and Pain

Brent A. Vogt and Leslie J. Vogt

Chapter contents

Descending control: Beyond the PAG 340
Enumerating descending projections from ACC and MCC 340

Goals of This Chapter 341

μ -Opioid Receptors 341

Binding and agonist stimulation 341
MOR localization in monkey 343
MOR neuron localization and G-protein coupling 345
MOR links to human emotion 346
Axons of the MITN and locus coeruleus express MOR 347
MOR inhibit neuronal activity yet elevate rCBF 347
MOR-driven intracortical cascade circuit 347

Placebo Map 348

Acupuncture placebo 349
Emotional placebos 350
Do placebos and hypnosis activate ME₁ and layer Va pyramidal neurons? 350

Descending Control Systems 350

Proximity of “unpleasantness” and “happiness” and relevance to descending control 352
The cingulate vocalization subregion regulates the PAG 352

Efferent Systems Drive Descending Noxious Inhibition: PB and PAG 354

Parabrachial Nucleus 354
Cingulate projections to the PAG 354
Cingulate cortex may inhibit the PAG to block the DNIS 355

Cingulate Cortex Influences Pronociceptive Subnucleus Reticularis Dorsalis: Pain Facilitation 356

Summary of descending systems that regulate autonomic and nociceptive processing 357

Cingulate Projections to the Amygdala 357

Tripartite Cingulate Descending Behavioral Control Systems 358
