

Mild Cognitive Impairment: Pivotal Cingulate Damage in Amnestic and Dysexecutive Subgroups

Julene K. Johnson, Elizabeth Head,
and Brent A. Vogt

Chapter contents

Goals of This Chapter 728	Cingulate A β peptides and 'non-overlap' with neurofibrillary degeneration 736
History of the MCI Concept 729	Cingulate neurodegeneration 737
Clinical Characteristics of MCI 729	MC1 in MCI: Early Conformation of Tau in Primary and Secondary Foci 739
Differential Diagnosis of MCI 730	Cell-Cycle Reentry Mechanism of Neurodegeneration 739
Clinical Outcomes of MCI 730	Primary Cingulate Focus and Its Progression in the Context of Prodromal AD 740
Imaging Cingulate Cortex in Amnestic MCI 731	Visuoconstructional Deficit: Key Symptom in Dysexecutive MCI Associated with dPCC Damage 742
Neuropathology of Amnestic MCI 732	Acknowledgments 742
Dysexecutive MCI and AD: Posterior Cingulate Damage and Visuoconstructional Deficit 732	References 743
Neuropathology in Dysexecutive MCI 733	
Executive Impairment in an MCI Case: The 'Frontal' Variant 733	
Frontal and temporal pathology 734	
Cingulate neurofibrillary damage:	
The 'posterior cingulate' variant 735
